Education

Gujarat Technological University - Shree Swaminarayan Institute of Technology August 2023 - May 2027

Bachelors of Engineering in Information Technology

CPI = 6.31/10.00

Coursework : Computer Networks, Operating Systems, Database Management Systems, Cryptography

Technical Skills

Programming Languages: C, Java, HTML, CSS

Cyber Security: Network Security, Ethical Hacking Fundamentals, Vulnerability Assessment, Security Best Practices

Networking: TCP/IP, Routing & Switching, Subnetting, VLANs, DNS, DHCP

Cloud Computing: Amazon Web Services (AWS) Fundamentals

System Administration: Windows Server Administration, Active Directory, Group Policy

Hardware & Infrastructure: PC Assembly, Hardware Troubleshooting, System Installation & Configuration

Tools: Cisco Packet Tracer, Wireshark, Kali Linux, Windows Server

Certifications

Cyber Security Masterclass

December 2025 - Present

H & B Computer Education

Gandhinagar, Gujarat, India

- Completed comprehensive training in Hardware & Networking, CCNA, MCSA, and AWS Fundamentals.
- Developed practical knowledge of Network Security, Vulnerability Assessment & Penetration Testing (VAPT), and Web Application Security.
- Gained hands-on experience with Kali Linux, Wireshark, Nmap, Cisco Packet Tracer, and Windows Server.
- Performed basic network analysis, vulnerability identification, and security testing in a controlled lab environment.

Projects

Pass Gaurd | *HTML5, CSS3, JavaScript, Web Crypto API, HaveIBeenPwned API, Vercel*

July 2026

- Developed a browser-based password security tool using HTML5, CSS3, and Vanilla JavaScript that performs real-time password strength analysis through Shannon Entropy, crack-time estimation, a 10-point scoring engine, and a cryptographically secure password generator (CSPRNG) to improve password security.
- Integrated the HaveIBeenPwned (HIBP) API using the privacy-first k-anonymity model with local SHA-1 hashing, automatic breach detection, common password and sequential pattern analysis, secure HTTP headers, and deployed the application on Vercel with HTTPS and GitHub auto-deployment.

NeonShield – Phishing URL & Domain Analyzer | *Python, FastAPI, JavaScript, HTML/CSS, Vercel*

June 2026

- Built a full-stack phishing URL and domain analyzer using Python (FastAPI), HTML, CSS, and JavaScript for real-time threat detection.
- Integrated WHOIS, DNS, SSL Certificate, VirusTotal, and Google Safe Browsing APIs with a weighted risk-scoring engine leveraging lexical, OSINT, and threat intelligence.
- Deployed the application on Vercel using serverless architecture with secure API handling and fallback mechanisms to ensure reliable and scalable analysis.

Soft Skills

Communication, Teamwork, Problem Solving, Time Management, Analytical Thinking, Adaptability

Interests

Cyber Security Research, Capture The Flag (CTF) Challenges, Learning Emerging Technologies, Community Service, Volunteering Activities
